

Euroizol Geosynthetics LLC is an engineering consulting company founded in 1997 in Kyiv, Ukraine. Our company specializes in providing clients with high-quality European geosynthetic products. Our first product was geotextile, and since then, we have been constantly expanding our range of construction materials.

For many years, we have been actively working to overcome the conservative attitude of builders toward new technologies. We have conducted training and convinced designers and builders of the necessity of implementing modern geosynthetic materials. As a result, we have an impressive list of projects where we have used our geosynthetic materials.

Our experience includes participation in the construction of international roadways, airport runways, stadiums for international championships, and objects of historical and cultural heritage. With each new project, our client's trust in us grows.

We need to disseminate knowledge, so we have started developing regulatory documents related to geosynthetic materials specifically for Ukrainian consumers. At the moment, we have developed more than 10 such documents. Thanks to our membership in the International Geosynthetics Society (IGS) since 2006, we receive valuable support in this endeavour.

Today, we have offices in every major city in Ukraine. Our team of 1000 employees works every day to provide our clients with quality construction materials and services. We take pride in contributing to the civil engineering industry and construction development.

Our company, Euroizol Geosynthetics LLC, offers a wide range of business solutions in the field of geosynthetics. We are not focused on a single product but provide a comprehensive approach that includes both products and services. We offer consultations to designers and builders, design services, testing, and installation.

Our product line includes high-quality geosynthetic materials such as non-woven geotextile, geogrids for soil reinforcement, geonets for asphalt pavement layers, various membranes, and waterproofing for concrete structures.

Our team of professionals is ready to provide consultations on selecting the right materials, develop projects, train specialists in the field of geosynthetics, and provide technical support during project execution.

Our main clients include engineering companies, construction organizations, architectural bureaus, and government organizations responsible for infrastructure development. We also collaborate with developers and clients involved in the construction of various types of projects.

We provide our services in Ukraine, where we have offices in all major cities. We actively work on an international level and participate in projects worldwide. Our goal is to be a reliable partner for clients in the field of geosynthetics and provide quality solutions for a variety of construction projects.

Our company, Euroizol Geosynthetics LLC, offers a wide range of business solutions in geosynthetics. We don't focus only on one product but provide a comprehensive approach that includes both products and services. We offer consultations to designers and builders, design services, testing, and installation.

Our product line includes high-quality geosynthetic materials such as non-woven geotextile, geogrids for reinforcing soil, geonets for asphalt road layers, various membranes, and waterproofing for concrete structures. We are also proud to be the exclusive official supplier of Typar®SF in Ukraine. This confirms our high quality and reliability and gives our clients confidence in receiving genuine Typar®SF products with guaranteed performance.

Our main clients include engineering companies, construction organizations, architectural bureaus, and government organizations responsible for infrastructure development in Ukraine. We also collaborate with developers and clients involved in the construction of various types of projects.

Geographically, we provide our services in Ukraine where we have offices in all major cities. We actively work internationally and participate in projects worldwide. Our goal is to be a reliable partner for clients in geosynthetics, regardless of their location, and provide quality solutions for various construction projects.

We proudly joined the International Geosynthetics Society (IGS) in 2006. Being part of IGS offers benefits like access to research, innovations, and practices in geosynthetics. We engage with global colleagues through conferences, seminars, and working groups, expanding knowledge and establishing connections. IGS membership validates our professional reputation and commitment to standards. We recommend joining IGS for development, learning, and collaboration, staying informed, connecting with professionals, and becoming industry leaders.
